Blackboard

Higher Education is feeling the pressure

Pressures on...

1 – Student Achievement

Drives Leadership Focus On...

Graduation Rates & Learning Outcomes

2 - Budget And Funding

Operational Efficiencies & Leveraged Investment

Critical question:

How to use data most effectively?

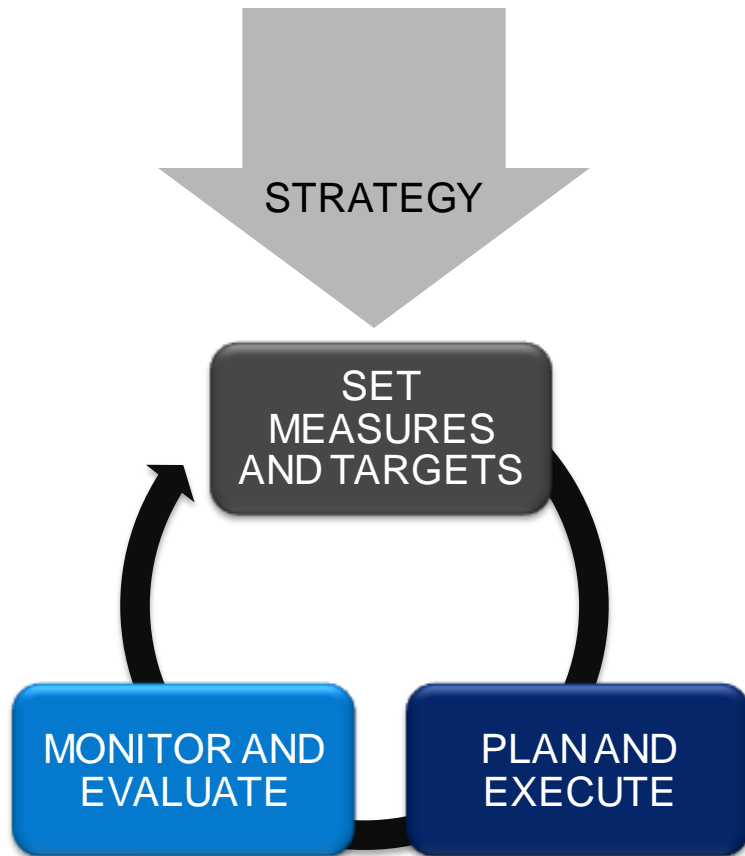

“In years past, data were simply collected and used for basic accounting, or reporting purposes as opposed to driving important decisions to facilitate meaningful change.”

Source:

Diane Wright, PhD July 2010. Using Data Driven Decision Making in Higher Education: A Pilot Case Study with Implications for Technology Policy

What we are hearing:

Need for a metrics-driven approach

- Provides a measure of progress toward goals
- Facilitates communication between institutional departments
- Maintains accountability
- Timely distribution and use of data

From the October 4th Symposium...

“How do you bring the technology, process and resources together to affect learning – and harvest the aggregated data that drives micro-level alterations to improve learning outcomes?”

“What kind of data can be pulled from the LMS to drive best practice adoption? There’s lots of support in this room for that kind of best practice sharing.”

“I know less about my technology plan than I do about the roof maintenance on my buildings”

Our focus today:

How can data inform decisions?

1 - Student achievement

2 - Operational efficiency

Our vision of data-enabled institutions

Current challenges

Data trapped in unintelligible tables in multiple systems

Misaligned data breeds skepticism and confusion

40+ hours request to report delivery timeframe

No way to drill into reports

Expensive super-users

Functional champions managing by instinct

Our vision of data-enabled institutions

Current challenges

Data trapped in unintelligible tables in multiple systems

Misaligned data breeds skepticism and confusion

40+ hours request to report delivery timeframe

No way to drill into reports

Expensive super-users

Functional champions managing by instinct

Evolved paradigm

All systems' data accessible and in simple, understandable terms

Single data source fosters confidence and trust

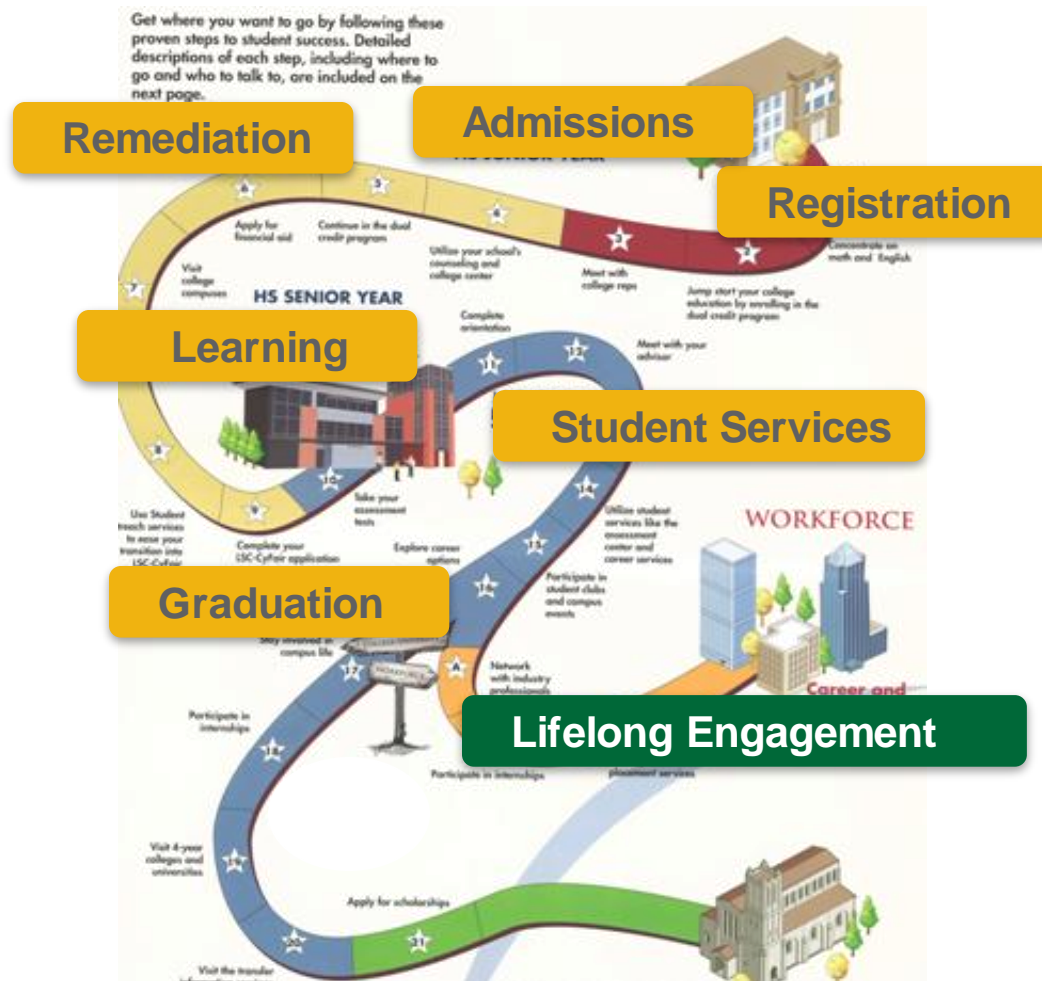

Right report needed in minutes

View source data and slide-and-dice quickly

Anyone can generate needed report

Self-service analysis inform decisions of functional champions

Metrics inform leaders to transform the entire student lifecycle

Case Studies

initiatives

Communication

Best Practice Case Study #2: Univ. of Maryland Baltimore County

“Now I can ask good questions immediately, find the answers myself and take the level of thinking to a deeper level of thought to get an even more interesting analysis....It makes a big difference in being able to make decisions that are far more data driven.”

EDUCAUSE Keynote Address
Dr. Freeman Hrabowski

Starter Questions For Discussion

Does this resonate?

As it pertains to data-driven decision making, where do you see pockets of innovation happening on campus today?

What is your “nirvana” vision for your institution’s access to data (ex. SIS, LMS, other systems)? What does success looks like and why?

Breakout Structure

Two Working Groups

Student Achievement / Academics

- Learning outcomes
- Retention & graduation
- Accreditation

Operational Effectiveness / Administrative Services

- Physical resources
- Financial aid
- Human resource management
- Capital management

90 Minutes: Conceive a working plan to evolve your institution

1. Document: Current impediments / roadblocks
2. Uncover: Who has been effective at overcoming these roadblocks today, and how?
3. Capture: What enabling structure - people, process or technology – are needed to achieve this evolved vision?

Other relevant points...

There will be...

- 2 co-facilitators per working group
- 1 scribe per working group
- 1 volunteer presenter
